
Your Partner in
High Performance
Fibers

EuroFibers is the distribution and innovation partner of the world's largest producers of High Performance Fibers.

Innovative solutions

With our fiber enhancing services and state-of-the-art coating technology, we help our customers to improve performance and reduce system costs.

Our promise

We are flexible, responsive and service minded. But above all we deliver: The right fiber in the right quantity, quality and timeframe. Tailored to your needs.

Processing

Twisting, Stranding & Plying

We enhance process ability and performance of our range of High Performance Fibers by means of twisting, even for very thin yarns of 55 dtex or less. Furthermore we have the ability to ply fibers together and produce rope yarns up to 150.000 dtex.

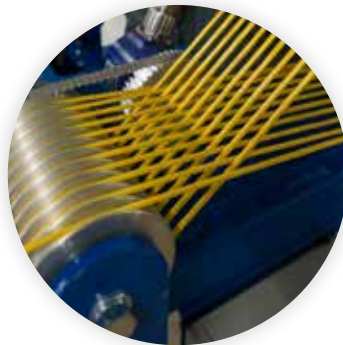

Fibers

EuroFibers provides High Performance Fibers of the industry leaders like DSM, Teijin Aramid, Toyobo and Kuraray. We are proud to be acknowledged as Premium Distribution Partner of DSM for Dyneema®, the world's strongest fiber™, and as Certified Reseller of Teijin Aramid for Twaron® and Technora®. All our products are available in a wide range of titers and supplied in many different form factors: flat or twisted, assembled, engineered or chopped to your specification.

Prisma®

Functionalized Yarns & Strands Coating Technology

Our coating lines and heat setting ovens enable us to functionalize High Performance Fibers and strands. We can now tailor the features of the fibers to the specific needs of our customer and end users.

Solutions beyond the ordinary

EuroFibers has established itself as innovation partner with surprising solutions in various fields. We are always curious about new possibilities and dare to think a little further.

For instance, EuroFibers co-developed a technology that more than doubles the abrasion resistance and tear strength of cotton. This ground breaking innovation of cotton reinforced with a negligible percentage of Dyneema® is a breakthrough in the cotton industry. Besides the increase in wear resistance, the technology also significantly improves tensile strength and tear resistance without adding a great amount of costs. Levi Strauss & Co. has now launched an original Levi's® 501 reinforced with Dyneema®.

Applications

- Yachting ropes
- Standing rigging
- Fencing suits
- Kite & paragliding lines
- Fishing lines
- Composites
- Reinforced cotton
- Slings
- Protective clothing
- Safety gloves
- Fiber optical cables
- Mooring lines
- Seismic ropes
- Performance apparel
- Concrete reinforcement
- Ripcords
- High Performance Fabrics
